## PROFILE SUMMARY

Highly motivated and results-driven Java developer with a focus on backend development. Demonstrated ability to tackle complex problems with enthusiasm and determination. Proficient in designing and implementing efficient solutions while adhering to best practices and industry standards. Strong teamwork and communication skills, coupled with a proactive approach to learning and staying updated with emerging technologies. Seeking opportunities to apply expertise and contribute effectively to backend development projects.

## PROJECTS

### Railway Ticket Booking System

**Overview:** The Railway Reservation System is a Java-based application that allows users to manage train reservations. It provides functionalities such as displaying available trains, checking seats availability, booking tickets, canceling tickets, and displaying ticket details.

**Features:**

1. Display Available Trains: Users can view the list of available trains along with their departure time, source, destination, and the number of seats available.
2. Check Seats Availability: Users can check the availability of seats for a specific train by entering the train number and the number of seats required.
3. Book a Ticket: Users can book tickets for a specific train by entering the train number and the number of seats to book. If seats are available, the booking is successful, otherwise, an error message is displayed.
4. Cancel a Ticket: Users can cancel previously booked tickets for a specific train by entering the train number and the number of seats to cancel. The canceled seats are added back to the available seats count.
5. Display Ticket Details: This feature is reserved for future development and can be used to display detailed information about booked tickets.

**Programming Language Used:**

- Java

## ADDITIONAL SKILLS

- Strong problem-solving and analytical skills
- Good communication and teamwork abilities
- A passion for continuous learning and self-improvement
